## AS Level Biology HEAD

<b>3.2 Cells</b>	<p><b>3.2.1.1 Structure of eukaryotic cells</b> Apply knowledge of the following cell features to explain the adaptations of eukaryotic cells: cell surface membrane, nucleus, mitochondria, chloroplasts, Golgi apparatus &amp; Golgi vesicles, lysosomes, ribosomes, endoplasmic reticulum, cell wall &amp; cell vacuole.</p>	<p><b>3.2.1.2 Structure of prokaryotic cells &amp; of viruses</b> Describe the features of prokaryotic cells.  Describe the structure of virus particles.  Compare prokaryotic cell structure to eukaryotic cell structure.</p>	<p><b>3.2.1.3 Methods of studying cells</b> Explain the principles &amp; limitations of optical microscopes, transmission electron microscopes &amp; scanning electron microscopes.  Measure the size of an object viewed with an optical microscope.  Describe the difference between magnification &amp; resolution.  Calculate magnification from microscope images.  Describe the principles of cell fractionation &amp; ultracentrifugation to separate cell components.</p>	<p><b>3.2.2 All cells arise from other cells</b> Recognise the stages of the cell cycle: interphase, prophase, metaphase, anaphase &amp; telophase (including cytokinesis).  Explain the appearance of cells in each stage of mitosis.  Describe the process of binary fission.  Required practical 2: Preparation of stained squashes of cells from plant root tips; set-up &amp; use of an optical microscope to identify the stages of mitosis in these stained squashes &amp; calculation of a mitotic index.</p>	<p><b>3.2.3 Transport across cell membranes</b> Describe diffusion, facilitated diffusion, osmosis, active transport &amp; co-transport.  Explain the adaptations of specialised cells in relation to the rate of transport across their internal &amp; external membranes.  Explain how surface area, number of channel or carrier proteins &amp; differences in gradients of concentration or water potential affect the rate of movement across cell membranes.  <b>Required practical 3:</b> Production of a dilution series of a solute to produce a calibration curve with which to identify the water potential of plant tissue.  <b>Required practical 4:</b> Investigation into the effect of a named variable on the permeability of cell-surface membranes.</p>	<p><b>3.2.4 Cell recognition &amp; the immune system</b> Define 'antigen'.  Describe phagocytosis.  Describe the response of T lymphocytes to a foreign antigen.  Describe the response of B lymphocytes to a foreign antigen &amp; the humoral response.  Explain the action of vaccines.  Explain the differences between active &amp; passive immunity.  Recall the structure of HIV, its replication in helper T cells &amp; how HIV causes symptoms of AIDS.  Explain why antibiotics are ineffective against viruses.  Describe the role of monoclonal antibodies in therapeutics &amp; ELISA testing.  Discuss ethical issues associated with the use of vaccines &amp; monoclonal antibodies.</p>
------------------	---	---	---	---	--	---

## AS Level Biology HEAD

<b>3.3 Organisms exchange substances with their environment</b>	<p><b>3.3.1 Surface area to volume ratio</b> Appreciate and explain the relationship between surface area to volume ratio &amp; metabolic rate.</p>	<p><b>3.3.2 Gas exchange</b> Describe the adaptations of different gas exchange surfaces.</p> <p>Describe the gross structure of the human gas exchange system.</p> <p>Recall the essential features of the alveolar epithelium as a surface over which gas exchange takes place.</p> <p>Describe the mechanism of breathing.</p> <p>Interpret information relating to the effects of lung disease on gas exchange and/or ventilation.</p> <p>Interpret data relating to the effects of pollution and smoking on the incidence of lung disease.</p>	<p><b>3.3.3 Digestion &amp; absorption</b> Describe the role of mammalian enzymes in the digestion of carbohydrates, lipids &amp; proteins.</p> <p>Outline the mechanisms of absorption for the products of digestions by cells lining the ileum of mammals.</p>	<p><b>3.3.4 Mass transport</b> Relate the structure of haemoglobins to their function in animals.</p> <p>Explain the role of haemoglobin and red blood cells in the transport of oxygen taking into account the Bohr effect.</p> <p>Recall the general pattern of blood circulation in a mammal naming the coronary arteries &amp; of the blood vessels entering &amp; leaving the heart, lungs &amp; kidneys.</p> <p>Describe the gross structure of the human heart and how pressure, volume and valve changes occur during the cardiac cycle.</p> <p>Link the structure of arteries, arterioles &amp; veins in relation to their function.</p> <p>Describe the structure of capillaries &amp; the importance of capillary beds as exchange surfaces.</p> <p>Describe the formation of tissue fluid &amp; its return to the circulatory system.</p> <p><b>Required practical 5:</b> Dissection of animal or plant gas exchange system or mass transport system or of organ within such a system.</p>	<p><b>3.3.4.2 Mass transport in plants</b> Explain the role of xylem in the stem &amp; leaves of plants.</p> <p>Describe the cohesion-tension theory of water transport in the xylem.</p> <p>Describe the role of phloem in the transport of organic substances in plants.</p> <p>Describe the mass flow hypothesis for the mechanism of translocation.</p> <p>Appreciate the use of tracers &amp; ringing experiments to investigate transport in plants.</p>
